

January 16, 2014

President Barack H. Obama
The White House
1600 Pennsylvania Avenue NW
Washington, D.C. 20500

Dear Mr. President:

In 2007, you pledged to give consumers the right to know if their food is genetically engineered (GE). National polls show that 93 percent of Americans share your view.

Regardless of age, income, education level or even party affiliation, Americans want the right to choose for themselves. Two state legislatures have already approved GE labeling, and more than 20 other states are considering GE labeling laws.

While we will continue to support state-level labeling efforts, we believe there should be a mandatory national labeling system. FDA has the authority to require food companies to disclose the presence of these novel food ingredients, and the agency has already required labeling of more than 3,000 ingredients, additives and food processes.

Moreover, FDA has a duty to act when the absence of labeling would leave consumers confused about the foods they buy. It's been more than a decade since FDA approved voluntary GE labeling, and consumers are more confused than ever. Allowing responsible companies to voluntarily disclose the presence of GE ingredients is simply not enough.

Mr. President, we urge you to fulfill your commitment to require GE labeling and to add the United States of America to the list of 64 nations that have already given their consumers the right to know what is in their food. In your first Presidential memorandum, you said that transparency is essential for ensuring public trust. We couldn't agree more.

Sincerely,
