Subject: Obtaining Hair Straightening Product MSDSs or SDSs

Dr. Sadrieh –

We continue to investigate how much formaldehyde/methylene glycol is present in hair straightening product bottles, if any, and whether the product labels and associated safety data sheets (SDSs) reflect this amount. However, we are having a difficult time obtaining MSDSs or SDSs for many hair straightening products (see attached list). Do you have MSDSs or SDSs for these products, and if so, can you please email them to me? If not, can you please provide advice on how we might obtain them? Thank you in advance for all of your help.
