Shontell,

As part of its efforts to monitor the formaldehyde-based cosmetics in the marketplace and part of the BB action, OCAC conducted a limited 2011-2012 lab survey which tested for the presence of formaldehyde and formaldehyde contain ingredients, including methylene glycol, in keratin base hair smoother. We also conducted a review of the precautionary labeling. Don, yourself and Fred reviewed the analytical data. I'm sure you recall it. The report is not downloaded in DCS. Where can I find a copy of that report/ review and tabulated results that was most likely shared with Steve and Linda. We need the results of this information for the CP BB. in order to support the increase in product surveillance and requirement for cautionary labeling of these products.. Please get back to me ASAP. Thanks.

Anna-Marie
