

# Share the Road Hawaii

We all remember the thrill of getting our first bicycle as a child, and the new freedom it gave us. This year, more than 100 million Americans will go for a bicycle ride, and continue to enjoy the thrill as they pedal along with their families, commute to work by bicycle, or just ride around town. Each year, more Americans take to the road on bicycles than ever before. Ten million more Americans ride bicycles today than rode in 1991 — a ten percent increase in just the past six years. Five million workers ride their bicycles to work — and twelve million more say they would if there were adequate bicycle facilities available.

Much of this increase is due to the Intermodal Surface Transportation Efficiency Act (ISTEA), the landmark transportation law passed by Congress in 1991. In the 18 years before ISTEA was passed, a total of \$40 million was spent on bicycle projects — just over \$2 million per year. Since ISTEA, the annual federal commitment to bicycles has increased one hundred fold. The Environmental Working Group's

analysis of Federal Highway Administration records reveals that since the beginning of fiscal year 1992, 9,515,000 dollars have been spent in Hawaii to make bicycling more accessible and safer, 1 % of all transportation spending. Nationwide, thousands of bicycle projects have been funded in all fifty states, and hundreds of miles of bicycle lanes and trails have been built.

Thanks to ISTEA, the United States is on the verge of an explosion of bicycle ridership. A recent poll found that two out of three voters support the use of federal funds to build better bicycle facilities. Yet now, as Congress prepares to reauthorize ISTEA, this substantial progress is endangered. Several proposals sponsored by powerful members of Congress could reduce or even eliminate ISTEA's dedicated funding for bicycle programs. As our study indicates, these proposals would halt the progress we have made towards making our communities more bicycle friendly, and prevent us from stopping hundreds of unnecessary bicycle fatalities each year.

## **The “Road Gang’s” Proposals Threaten To End Support For Bicycles**

Some proposals before Congress would reverse our nation’s transportation policy and return us to the highways-only days by eliminating many of the gains made when ISTEA was passed in 1991. These proposals would make our communities less safe for bicyclists by gutting provisions of ISTEA known as the Transportation Enhancements and Congestion Mitigation and Air Quality Improvement programs. Most of these proposals are supported by the “Road Gang”, a collection of lobbyists for the highway, oil, and automobile industries, as well as many state Departments of Transportation. These proposals include:

- A proposal by Rep. Bud Shuster (R-PA), chair of the House Transportation and Infrastructure Committee, would allow the state Departments of Transportation to transfer 50 percent of the money for bicycle facilities and use it to build more highways or other programs instead, almost certainly returning transportation policy to the pre-ISTEA days when little money was spent on bicycle use and bicycle safety (BNA 1997).
- A proposal known as “STEP-21,” introduced in the House by Tom DeLay (R-TX) would gut the ISTEA law by turning the entire

program into a federal block grant — essentially eliminating the dedicated Transportation Enhancements and Congestion Mitigation and Air Quality Improvement (CMAQ) programs that have provided over \$1 billion for bikes since 1991.

- “STARS-2000,” legislation introduced by Sen. Max Baucus (D-MT) would also reshape ISTEA and reduce funding for bicycle-safe streets. In addition, this legislation would cut funding for the Congestion Mitigation and Air Quality Improvement Program by almost two thirds, from \$1 billion per year to \$387 million per year.

### **Congress Should Increase Support for Biking in ISTEA**

Slowly but surely, the landmark changes embodied in ISTEA are making communities more bicycle friendly. In addition to dedicated funding for bicycles, ISTEA requires the appointment of a bike and pedestrian coordinator in every state, the routine inclusion of bicycle plans in state and local transportation plans, and encourages public involvement in the development of these plans. As a result, ISTEA has increased public involvement in bicycle safety and bicycle-friendly community design, through a planning process that was non-existent before the law’s passage.

Although ISTEAs new planning requirements and funding programs have only been in existence for five years, hundreds of miles of bike lanes and trails have already been added to our communities. These facilities are almost certainly a factor in the increased number of people riding bikes. But there is still a lot of room for improvement. Indeed, with some modest improvements to ISTEAs to expand the development of safer communities hundreds of lives could be saved. Our analysis indicates that preserving and strengthening the pro-bicycling features of ISTEAs can encourage more bike use and make bicycling even safer. We found that:

- Between 1986 and 1995, a total of 39 bicyclists (4 per year) were struck and killed by motor vehicles in Hawaii. And for every bicyclist killed by a car, another 88 suffer injuries — for a total of 343 bicyclists injured by cars each year in Hawaii.
- A significant number (69 percent) of all bicyclists killed by cars in Hawaii are killed in their neighborhoods, on local roads, collector streets, and minor arterials.
- 33.3 percent of all bicycle fatalities in Hawaii involved children under the age of 18 — a total of 13 fatalities in the last ten years.

- Many children are also injured; for every child on a bike who is killed by a car another 100 are injured, for a total of 130 children injured by cars while bicycling in Hawaii each year.

These data serve as indicators of the work that needs to be done, and of the vast benefits that will be achieved when our roads are made safer for bicycling. Some may be tempted to look at these data and jump to the conclusion that they — and their children — should stay off of bicycles because of safety concerns. This would be a mistake. Bicycling remains an activity that is good for our children, our health, and our communities. The real goals are to make bicycling more accessible and safer. The city of Davis, California provides an example of how this can be done. Davis began considering bicycle use and bicycle safety years before ISTEAs was passed in 1991. The city has built many miles of bike trails and lanes, implemented education and enforcement campaigns, and aggressively acted to reduce risks. As a result, more than 20 percent of trips in Davis are made by bike (many times higher than the national average), and children ride everywhere. Over the past ten years, no one has been killed in Davis California while riding a bicycle, proof that increased ridership and increase safety can go hand in hand.

Our analysis of federal highway spending records show that

in 27 states and the District of Columbia, less than one percent of all federal transportation dollars were spent on bicycle related projects. Only four states spent more than one percent. We need to preserve and strengthen ISTEA to help communities accommodate and encourage bicycling while reducing the current risks.

### **Where Are Bicycle Fatality Rates The Highest?**

The national average bicycle fatality rate between 1986 and 1995 was 3.4 bicyclists per million individuals. In Hawaii, the fatality rate was 3.5, ranking it 14th in the country.

Among metropolitan areas in Hawaii, Honolulu, HI had the highest fatality rate (1.8 fatalities per million).

The counties with the most fatalities were Honolulu County, Hawaii County, and Maui County.

# Bicycle Safety in Hawaii

**Table 1. 39 bicyclists were killed and many more injured by automobiles in Hawaii between 1986 and 1995.**

Total number of bicyclists killed by cars (1986-1995):	39
Estimated number of bicyclists injured by cars (1986-1995):	3,432
Annual bicyclist fatality rate per million population (1986-1995): (National average is 3.4)	3.5
Percent of all auto related fatalities involving bicyclists (1986-1995):	2.8%

**Table 2. Children aged 18 and under account for 33% of all cyclists killed by cars in Hawaii.**

Number of bicyclists 18 and under killed by cars (1986-1995):	13
Estimated number of bicyclists 18 and under injured by cars (1986-1995):	1,300
Percent of bicycle fatalities involving children aged 18 and under (1986-1995):	33%
Percent of U.S. population aged 18 and under (1990):	27%
Relative risk for children age 18 and under:	1.3

**Table 3. ISTEA has provided needed funds for bicycle safety and bicycle access.**

Total Federal Highway Spending (1992-1996):	\$929,764,271
Total federal spending on bicycle safety and access (1992-1996):	\$9,515,267
Percent of spending on bicycle safety and access (1992-1996):	1.0%

**Table 4. 69 percent of all bicyclists killed by cars in Hawaii are killed on neighborhood streets.**

Road Type	Percent of bicyclists killed by cars*
<b>Major Roads:</b>	
Interstates:	0 %
Freeways/Expressways:	5 %
Primary Arteries:	25 %
<b>Neighborhood Streets:</b>	
Minor Arteries:	30 %
Collectors:	23 %
Local Roads:	15 %

**Table 5. Counties in Hawaii where the most bicyclists were killed by cars, 1986-1995.**

County	Number of bicyclists killed by cars (1986-1995)	Estimated number of bicyclists injured by cars (1986-1995)
Honolulu County	15	1,320
Hawaii County	12	1,056
Maui County	10	880
Kauai County	2	176
Kalawao County	0	

**Table 6. Metro Areas in Hawaii with the highest fatality rates for bicyclists killed by cars (1986-1995).**

Metropolitan Area	Metro area population 1990	Number of bicyclists killed by cars (1986-1995)	Annual bicyclist fatality rate per 1,000,000	Estimated number of bicyclists injured by cars (1986-1995)
1) Honolulu, HI	836,231	15	1.8	1,320
<b>Statewide Total</b>	<b>1,108,229</b>	<b>39</b>	<b>3.5</b>	<b>3,432</b>

\* Note: Percentages may not add to 100 percent due to incomplete data on road type in the bicycle fatality database.
